

Oracle and Constellar Hit the Ivy League

“As we deploy Oracle Financials, Constellar Hub will help us move financial data from 40 different feeds through Oracle GL and data from 10 different feeds through Oracle AP. Further, the data sources consist of a wide range of business-critical applications, including payroll, budgets, inter-departmental charges, student receivables and university gifts, all on different platforms, some custom developed and some third party products.

The integration of Constellar Hub and Oracle Financials will help us ensure that these critical systems operate seamlessly across our environment, and it saves us from having to develop integration programs from scratch, which we would have to do without Constellar Hub.”

Project Manager, Ivy League University

Solution Snapshot

Through Oracle’s CAI Program, one of the oldest and most prestigious of the Ivy League schools – and Constellar Corporation – the leading enterprise application integration (EAI) solutions company – are working together to create a comprehensive business solution for moving and transforming data between the university’s mission-critical applications, including Oracle AP, Oracle GL and a data warehouse running on Oracle’s RDBMS, all in one, high-powered “hub” – the Constellar Hub.

Anticipated Benefits

- Improved data quality through centralized, standardized corporate data flows.
- Ability to pump enormous volumes of data between disparate application systems with tremendous throughput.

- Flexibility to integrate with yet-to-be-determined applications in the future.
- Ability to leverage new technologies and integrate them into existing environments, without having to abandon legacy systems or build manual interfaces.

Business Problem

The university is implementing strategic new technologies, including Oracle Financials and a data warehouse, all of which require exceptionally high volumes of data to be moved and transformed from/to many different source and target systems, including custom applications, legacy systems, and newer package applications. Enabling and controlling these data flows between different applications is extremely complex and costly, and often data quality is compromised. That knowledge lead the university to seek a better business solution.

Oracle Worldwide Alliance Solution

Through several alliances with Oracle, Constellar Hub, the market-leading transformation engine, is tightly integrated with both the Oracle RDBMS and Oracle Financials, providing customers with an integrated solution for interfacing with Oracle Financials, including AP and GL applications, as well as non-Oracle application systems. Through these alliances, customers can leverage the proven performance and reliability of Oracle as well as the powerful data transformation capabilities of Constellar Hub and Constellar WarehouseBuilder EAI solutions.

Constellar Corporation

Constellar Corporation is the leading provider of hub-based enterprise application integration (EAI) software and services for large organizations worldwide. Founded in 1988, Constellar developed the first EAI software platform, enabling customers to dramatically speed the implementation of new applications and data warehouses, and reduce the total cost of ownership and maintenance of their IT infrastructures.
